Evan's Text Editor

About

        Evan's text editor is an extremely basic text editor. Its purpose is to demonstrate how text can be color schemed using DFA traversal. Each state of the DFA can be given a designated text color. This is accomplished the same effect is the text editors people use every day (e.g. notepad++, sublime).

Instructions To Launch:
- Clone github repository "https://github.com/evanjhopkins/FormalLang.git"
- Compile java source located in ~/Milestone.2/Milestone2/src
